PACK YOUR BAG

Abstract:

Traveling involves meticulous planning, and packing is a crucial aspect that can significantly impact the travel experience. The "Pack Your Bag" app addresses common challenges faced by travelers, such as forgetting essential items or overpacking. By offering a user-friendly platform to create and manage packing lists, the app aims to streamline the packing process, reduce stress, and ensure users are well-prepared for their journeys.

Project IDE and tools :

- Android Studio
- Language : Java
- XML
- Database : RoomDatabase
- Version Control: Git (GitHub for repository management)

Main Features:

- Intuitive Packing Lists:
  - Create customized packing lists for different types of trips (e.g., business, leisure, camping).
  - Pre-defined templates for common travel scenarios.

- Item Catalog:
  - Maintain a catalog of common travel items.
  - Add items from the catalog to packing lists with ease.

- Checklist Management:
  - Interactive checklist to mark items as packed or unpacked.
  - Visual indicators for completed items and pending tasks.

App Components:

Using Android Studio, I have developed this app with xml layouts respective to the user interface. To activate functionality to the design/xml files, I have used JAVA files respectively.

Following is a short description of the XML files along with their functionality:

- **Splash Screen:** Provides an introductory view of the application when launched.
- **Main Page:** The primary interface where users can interact with their packing lists and other features.
- **Check List Items:** Allows users to view and manage items on their packing list.
- **About Us:** Provides information about the app and its mission.

About Us

Limitations:

- **Device Compatibility:** The app may have limited functionality on older or less common Android devices.
- **Online Functionality:** The app operates entirely offline and cannot sync data or be managed online.
- **Performance:** The app's performance may vary based on the number of items in the packing list and the device’s hardware.
